

COMMUNITY ENERGY PLAN IMPLEMENTATION SUPPORT

OVERVIEW

Communities across Canada are realizing significant economic, environmental, health and socioeconomic benefits as a result of Community Energy Plan (CEP) implementation.

Drawing on decades of experience, a vast network of community energy planning practitioners, as well as research on CEP implementation, QUEST can help your community move your CEP from a vision to implementation.

WHO BENEFITS

The successful implementation of CEPs requires participation from a wide range of stakeholders. QUEST can provide CEP implementation support to all stakeholders engaged in the community energy planning process, including:

- Local governments
- Utilities
- The real estate sector including building owners, operators and builders
- Others

WHAT WE OFFER

QUEST offers customized CEP implementation support to meet your needs, depending on what stage your community is at in the community energy planning process. We are specialists in convening, energy, policy and data, with specific experience designing broad-based engagement strategies, cross-sectoral networks, and providing decision-support processes and tools. We have the proven capacity to:

- Provide coaching support for CEP implementation activities
- Conduct a CEP Implementation Readiness Assessment, providing an independent review and analysis of the community's strengths and weaknesses as it relates to community context, the CEP, management and governance, stakeholder engagement and staff and financial resources for implementation
- Provide an independent review and assessment of CEP materials
- Coordinate planning alignment activities that undertake to integrate planning processes among the various stakeholders engaged in CEP implementation
- And more

TESTIMONIAL

"With QUEST's support, the City of Campbell River has been able put some of the key pieces in place to support the long-term implementation of our Community Energy and Emissions Plan (CEEP). QUEST helped us to rethink the value proposition of our CEEP and helped to foster the internal alignment and buy-in we needed to implement the energy measures identified in the plan."

~Marianne Wade, Development Services Manager, City of Campbell River
